About Me

I am a Systems Analysis and Development student entering the IT and software development market. My core background is Android development using Kotlin/Java, REST APIs, Firebase, and SQLite/Room, along with Git/GitHub.

I learn quickly and value structured routines, processes, and quality standards. My goal is to grow within a large company, delivering results while continuously improving my technical skills.

Languages

- English (Fluent)
- Spanish (Advanced)
- Japanese (Basic)

Education

High School
EREM Porto Digital 2013-2015

Foundation focused on discipline, problem-solving, and teamwork, with exposure to a technology-oriented academic environment.

Bachelor's Degree in Biomedicine
Unibra 2021-2023

Program focused on scientific methodology, critical data analysis, and laboratory procedures, developing attention to detail, quality, and compliance.

Technologist in Systems Analysis and Development
Faculdade SENAC PE 2024-2026

Focused on software development, programming logic, databases, and systems engineering, with practical projects and collaborative work using version control tools.

Hard Skills

- Python
- Kotlin/Java (Android)
- APIs REST
- Firebase,
- SQLite/Room
- Git/GitHub
- Postman.

Soft Skills

- Discipline
- Clear communication
- Teamwork
- Fast learning
- Continuous improvement
- Attention to detail

Projects

ReciELO
SENAC PE - Integrative Project 2024

Academic project focused on compliance and governance (LGPD/security and processes), including risk mapping, policy definition, and technical documentation. Contributed to development, rule modeling, deliverables organization, and standardization of controls to reduce failures and improve traceability.

Canes Compliance
SENAC PE - Integrative Project 2025

Academic project focused on compliance and governance (LGPD/security and processes), including risk mapping, policy definition, and technical documentation. Contributed to development, rule modeling, deliverables organization, and standardization of controls to reduce failures and improve traceability.
